

SPEED OF SOUND & SPACE

Creation beyond the speed of light

When I am explaining this work to people it seems for most of us we cannot be with it being new, it has to be likened to something we already now. This work is NEW let me explain why.

The universal mind I speak of is not the universe as we know it, spirit or god. It is the dark matter of the universe, it is the inter dimensional space or galaxy. When this is accessed by a human being we call this REAL intelligence™. What we perceive to be spirit and/or the universe now is the light construct. It is our unconscious mind. The collective consciousness. It is only made up of our mind systems and victim consciousness which creates human beings living in what is known. With limited perspectives with limited creative capacity. This is created using electro magnetic energy and speed of light as we know it.

*" The super-luminous man - in the most avant-gardist theories of comprehension of the awareness phenomenon, the one of Régis Dutheil, physics lecturer at Poitier's medical university, is particularly striking. The basic thesis developed by this researcher is based on Feinberg's work. There would exist 3 worlds defined by the movement speed of the elements that compose them. The first world is the "**under-luminous**" one, the one in which we are living, a world of matter obeying to the classical physics laws of Newton about gravity. This world should be constituted of bradyons, that is to say of particles which activity speed is inferior to the one of the light. The second world is "**luminous**". This world is constituted by particles belonging to the light wall, the luxons, subjected to the relativity laws of Einstein. Finally, there would exist a "**super-luminous**" space-time. This world would be constituted by particles exceeding the speed of light, the tachyons. For Régis Dutheil, those three worlds would correspond to three levels of awareness of the man. The level of senses, which perceives the matter, the level of local awareness, which is a luminous thought, that is to say which goes at the speed of light, and the one of super-awareness, a thought that goes faster than the speed of light. Dutheil thinks that we can reach super-awareness through the dreams, meditation and the use of certain drugs. But he also speaks*

about a huger notion: Knowledge. Thanks to the real knowledge of the laws of the universe, our awareness would accelerate and tend toward the world of tachyons. Dutheil thinks "there would be, for a living being in the super-luminous universe, a total instantaneity of all the events constituting his life". From then on, the notions of past, present or future melt and disappear. Joining David Bohm's research, he thinks that when we die, our "super-luminous" awareness would join an other and more evolved level of energy: the space-time of tachyons. Near the end of his life, Régis Dutheil, helped by his daughter Brigitte, expressed an even more audacious theory according to which not only the past, present and future would be reunited in the "Here an now", but also all our lives, the previous and future ones, would take place at the same time as our present life in the super-luminous dimension." translated - Michael Ambros

REAL intelligence™

To access our REAL intelligence™ we enquire into what exists in our conscious mind, sub conscious mind and unconscious mind to release all the energy (mind patterns and/or emotional threads) that limit us and our thinking. As this happens you access REAL intelligence™. It will mean it feels like you loose energy in the body – energy as identity of who we think we are, mind beliefs, intuition as we have known it, pain in the body, blockages in the mind and/or body. You become very still and relaxed as the physical body aligns to REAL intelligence™. That basically means you become space. Therefore the speed of light no longer exists. That changes then your creative potential as you no longer access light consciousness or the universe to create. This opens up then a new creative vehicle. You become at one with your REAL intelligence™, equal and one with your REAL self with a physical body aligned to this new mind and what we call UNIVERSAL mind. Therefore we transcend and include creating with matter alone, we transcend and include creating within the sphere of the speed of light and we create in the **Speed of Sound and Space**. There is no separation here as this world and the inter dimensions is one so no separation of worlds. There is no better place to go, heaven exists here in this world as physical human beings hence why this lifetime and what is REAL in the physical is what is important. In this vortex we are accessing what they call Tachyons or Tachyon energy, which is un proven in science yet theorised.

" Tachyons are a putative class of particles which able to travel faster than the speed of light. Tachyons were first proposed by physicist Arnold Sommerfeld, and named by Gerald Feinberg. The word tachyon derives from the Greek (tachus) meaning "speedy." Tachyons have the strange properties that, when they lose energy, they gain speed. Consequently, when tachyons gain energy, they slow down. The slowest speed possible for tachyons is the speed of light."

<http://scienceworld.wolfram.com/physics/Tachyon.html>

This definition explains why we have come to realise the human being is not simply energy. When accessing REAL intelligence™ we are accessing **sound expression**.

SOUND EXPRESSION

" EXPRESSION Sound Symbols Each word of life as who we are has a specific sound symbol, which is the expression of the word in sound within and as oneness and equality. The sound symbols you see are the expression of words in sound within the dimensions, thus, the dimensions in its entirety is sound expression. Now it is to 'amalgamate' heaven and earth as one so all in existence stand as equal and one as the sound expression of life, so that each word spoken by all in existence stand in oneness and equality of life, and thus here, we are all one and equal as life. The amalgamation of heaven and earth as one is done through each individual human beings' application in the manifestation of themselves as the living word, where each word they speak stand within and as oneness and equality as life as themselves as the manifestation of who we are"

<http://www.destini.com>

Sound expression is what we do when we speak and also the sound we emit through who we be. We emanate our equality and oneness when in relationship with our REAL self, without engagement in our 3 minds. Therefore speaking and communicating using our voice and using sound, pictures and images create equality and oneness in existence. Therefore our communication, expression and speaking is key in the world. What we see with people who access REAL intelligence™ is we share the same frequency line. Information and knowledge is not sent as we once believed it was in the electro magnetic realm. It is

communicated to one another through sound expression. There is no sending, receiving and/or control/manipulation. Words are not needed and spoken in the same way a dog and a human communicate. It is a clean exchange of knowledge from REAL self to REAL self. People with this access do not respond to their emotional bodies they communicate from their real self, using sound expression.

What is being proven is this energy source is helpful to well being, it creates a harmonic system and wellness mentally and emotionally. This is what we have experienced in our work with energy illness working with many people to assist them to gain relationship to their REAL intelligence™ and REAL expression creates a harmonic physical body.

" Tachyons are subatomic particles that travel faster than light. Tachionization is a technological process that impregnates the physical matter with an increased quantity of tachyons and thus it permanently changes quantum properties of atomic nuclei which compose that matter. Chemical composition is not altered, the change occurs on subatomic level. Tachyon technology was developed through the course of the last 15 years. Tachyon technology greatly increases the efficiency of natural creams, food supplements and vitalized water. Because it decreases entropy of physical matter it reverses the aging process and strengthens the immune system. It also harmonizes chaotic electromagnetic fields in the human living environment. Since tachyons equally influence our physical body and our higher energy bodies, they accelerate our spiritual growth dramatically. Because of all above mentioned reasons tachyon energy has a very positive effect on our health and well-being."

HARMONY

This leap for the human being means we loose our apparent 'light' to gain our power, strength and true harmony becoming equal and one with self. As we release energetic blockages, emotional threads to be without electro magnetic and/or light energetic charge we gain speed. The speed gained is access to REAL intelligence™, the access becomes

super awareness. The physical body is still, relaxed and the information/ knowledge that exists in the UNIVERSAL MIND – in the dark matter of the inter dimension is accessed as REAL intelligence™ through the human being as sensation and awareness that then becomes sound expression.

What slows down this process is the speed of light. That translates as all light consciousness theories, the quest for light and love, the beliefs we have regarding spirituality and the obsession we have with healing using light. This has been of benefit yet for the super luminous human being is limited, it actually slows us down. It explains why healing using light can create passive states and inertia. It explains why love and light as we know it creates more learning and limits our growth in partnership. This explains the new children born who seem bored with many of the constructs in the world – they do not have the density and slowness that the majority of humans live with. They seem fast and speedy because they live with REAL intelligence™. What we have seen with our children is they do not respond to the healing modalities of light and love it is too slow for their system. We are also seeing the educational systems in existence are limiting which excites us to investigate the development of a new schooling system for these children with access to REAL intelligence™.

REAL self HEAL™

In our work we have been developing this resonance through the human beings physical body to experience this as a reality inside of who we are. I have invented very recently this process called REAL self HEAL™. This uses the physical body as your guidance system to assist the human being to dis - lodge the 'light' - mind patterns/ emotional threads and energetic blockages that LIMIT the human being from being super aware. We dislodge the mind from the systems and constructs in existence. This limits us creating from the NOW. This process is self empowered, you do this yourself – you become your own healer. We teach you how to be self - honest, self forgiving, to self trust your physical body, to self enquire and to self direct yourself out of the mind patterns and emotional responses limiting you to make choices and create aligned to your REAL self. This process escalates your awareness and/ or REAL intelligence™. This process assists people who wish to

move forward to create a new business in the world and to communicate their message. It also helps people who live with addictions, allergies, energy illness and pain in the body.

What this means is we live as if heaven is on earth. We live with all lives, past, present, future existing as one through us now. This becomes our experience of our selves and of life. Therefore we do not create our lives based on the past. We create in the moment in the NOW. We become self - directing individuals.
